TIU Research Advances Sustainable Consumption and Production

Dr. Hussaini Bala and Prof. Dr. Ghousia Khatoon of Tishk International University published a study in Environmental Science and Pollution Research (Springer) on green taxation's impact on renewable energy technologies in Sub-Saharan Commonwealth and non-Commonwealth countries. Aligning with Sustainable Development Goal 12 (Responsible Consumption and Production), the research highlights the role of fiscal policies in promoting sustainable resource use, reducing environmental degradation, and fostering clean energy adoption. Their findings advocate for policy-driven solutions that encourage responsible production practices, minimize waste, and support a circular economy, ensuring long-term sustainability in global energy and economic systems.
